

Why are there missing files for participant 0005?

- Psychopy terminated the experiment shortly before the end and didn't save the data as it usually does when an experiment crashes. I don't even know why it crashed, there was no error message whatsoever and it ran smoothly before. Long story short, this is why there is no csv with the experiment data.
- Eyetracking didn't work because the participant didn't read the exclusion criteria, had very bad eyesight, and could only do the experiment wearing contact lenses (this didn't work) or thick glasses (which didn't work either). So no EDF file either.
- The only file that's usable here is the questionnaire csv.
- Concerning the EEG: The CP4 electrode had an impedance of >500 and couldn't be fixed.
